

PipeSak® Pipeline Protection

Technical Notes

RockStop® Rockshield CP Compatibility

DESCRIPTION

Third party corrosion experts have tested and proven that RockStop® rockshield works with cathodic protection systems.¹

RockStop® rockshield was specifically designed to prevent impact or puncture-related corrosion with an engineered interlocking proprietary blend of fibers that still allow the movement of groundwater to and from the pipeline surface for cathodic protection systems.

RockStop® rockshield has a permeability similar to a clean sand, ensuring water will drain from RockStop® rockshield as it does from sand padding or sandy backfill.²

Contact PipeSak to learn more and get a sample of RockStop® Rockshield.

RockStop® CP Testing Summary

Product	Property	Method	Result
4"-20" OD 24"-48" OD	CP Shielding ¹	ASTM G95M	No interference with CP systems
4"-20" OD 24"-60" OD	Permeability ²	ASTM D4491	17400 gal/ft ² /day (0.82cm/s) 5300 gal/ft ² /day (0.25 cm/s)
