PIPESAK.COM

THE BEST IN BUOYANCY CONTROL JUST GOT BETTER

The PipeSak® geotextile pipeline weight you know and trust just got better. Our all-new low-profile design offers the same strong, permanent protection you've come to expect and now, allows for an even lower depth of cover that makes installation easier and more economical.

The new design allows for up to 30% lower depth of cover compared to our previous generation, offers even more stability, and will save even more time, labour and cost during construction. PipeSak® pipeline weights can be installed with a single lift hook and filled with aggregate from a local source. Our unique filling frame and product design means minimal labour requirements and no additional equipment necessary to fill or place. With its multi-chamber design, our geotextile pipeline weight is engineered to evenly distribute the weight which improves safety and ensures integrity is maintained, even if one compartment becomes damaged. From first transport to the last install, we have designed PipeSak® to offer unbeatable value.

Contact us for proper PipeSak weight spacing requirements.

- ✓ HIGH STRENGTH, GEOTEXTILE FABRIC
- ✓ LOW & NARROW PROFILE
- ✓ SUPERIOR UV INHIBITORS
- ✓ 4 X SAFETY FACTOR
- ✓ MULTIPLE COMPARTMENTS
- ✓ NO RISK OF CATHODIC SHIELDING
- ✓ NO RISK OF COATING DAMAGE
- ✓ CAN BE INSTALLED ON A FLOATING PIPE
- ✓ EASY TO TRANSPORT
- ✓ SHALLOWER TRENCH DEPTH

ECO-FRIENDLY

- Allows pipeline to move slightly while still maintaining negative buoyancy and coating protection.
- Easy passage of water supporting cathodic protection systems.
- Non-biodegradable and use natural, local aggregate to fill.

STRONG

- Manufactured from the heaviest grade geotextile in the industry.
- All fabric, webbing, and thread meet a minimum 4 times safety factor.

SAFE & DURABLE

- The multi-compartment design improves safety, speeds up installation, and ensures integrity.
- Engineered to evenly distribute the weight.
- Safer and longer-lasting.

COST EFFECTIVE

- Easy to transport and install.
- Require no extra trench depth and no trench dewatering.

SMART CHOICE

- Can be installed onto a floating pipeline without risk of tipping.
- Engineered by industry experts.
- 30% lower depth of cover compared to our previous generation

EASY INSTALL

- Installation is safe and simple.
- Filled with aggregate from a local source.
- Installed with a single lift hook.
- Patented wedge design for easier installation.
